

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

CONTENTS

<i>The Chemical Philosophy of the High-school Text-books:</i> PROFESSOR W. LASH MILLER .	257
<i>The General Essentials in Teaching Qualitative Analysis:</i> PROFESSOR HERMON C. COOPER	263
<i>Surveys in Alaska</i>	265
<i>The British Census</i>	266
<i>Charles Otis Whitman</i>	267
<i>Scientific Notes and News</i>	268
<i>University and Educational News</i>	271
<i>Discussion and Correspondence:—</i>	
Coal near Pinedale, Ariz.: ALBERT B. REAGAN. A Second Record for Blanding's Turtle in Concord, Mass.: R. HEBER HOWE, JR.	271
<i>Scientific Books:—</i>	
Kofoed's <i>Biological Stations of Europe</i> : J. S. K. Rotch and Palmer's <i>Charts of the Atmosphere</i> : JAMES MEANS. <i>Magic's Principles of Physics</i> , Hurst and Lattey's <i>Text-book of Physics</i> : PROFESSOR A. D. COLE ..	272
<i>Botanical Notes:—</i>	
More <i>Elementary Botany</i> ; <i>A New Manual of Botany</i> ; <i>Rocky Mountain Botany</i> ; <i>Botanical Notes</i> : PROFESSOR CHARLES E. BESSEY	277
<i>Special Articles:—</i>	
On the <i>Stereotropism of Embryonic Cells</i> : PROFESSOR ROSS G. HARRISON. On the <i>Increase in Oxidation in the Egg at the Beginning of Development</i> : DRS. P. H. MITCHELL and J. F. McCLENDON. <i>Theories of Electrical Discharge</i> : PROFESSOR FRANCIS E. NIPHER	279
<i>The American Chemical Society</i>	283

THE CHEMICAL PHILOSOPHY OF THE HIGH-SCHOOL TEXT-BOOKS¹

At the present time the conception of continuity or unity or uniformity plays a great part in all departments of science; not only that continuity in time postulated by geologists and paleontologists, but the idea that all the divisions and classes established by science are but convenient though perhaps indispensable tools of the human mind, while nature, the object of our study, is one and indivisible.

To take examples from biology: modern systematists agree that the conceptions genus, species, variety, race, shade into one another, so that what in one group are regarded as generic distinctions, in another are hardly allowed to differentiate species; the very word biology recognizes the non-existence of a boundary between animal and vegetable; and a group of workers of the present day are busy removing even the distinction between inanimate and animate.

This view of nature, though now so widely accepted, is by no means contemporaneous with the birth of modern science; it came in only when the study of the most striking—because extreme—objects or relations had been followed by that of the less strongly characterized connecting links; and its acceptance has been hindered, in many cases, by the prevalence of certain extra-experimental or extra-observational “explanations” made up to account for the earliest studied, exceptional, phenomena.

MSS. intended for publication and books, etc., intended for review should be sent to the Editor of SCIENCE, Garrison-on-Hudson, N. Y.

¹ Address of the vice-chairman of the Division of Inorganic and Physical Chemistry, American Chemical Society, Indianapolis meeting, 1911.
